DUAL DEGREE PROGRAM WITH THE COLLEGE OF ENGINEERING AND THE COLLEGE OF SCIENCE

Coordinators:
College of Engineering: Michael Ryan, Associate Dean
College of Science: Malgorzata Dobrowolska-Furdyna, Associate Dean

Program of Studies

The five-year dual degree program between the College of Science and the College of Engineering enables the student to acquire degrees from both colleges—the bachelor of science from the College of Science and the bachelor of science degree in a chosen program of the College of Engineering.

This combination program, instituted in 2013, offers students the advantages of the liberal arts aspects of natural science and mathematics education coupled with a strong technical education. Because a student may enter the program from either college, both colleges have agreed to a certain degree of flexibility in allowing students to meet degree requirements.

The following guidelines apply to all students intending to pursue this dual degree program, regardless of the student's initial college:

1. Students must complete the degree requirements of both colleges, including University requirements (satisfied only once for both degrees), college requirements (with liberal appropriate substitutions for similar courses), and major requirements (with limited appropriate substitutions for similar content). Students may double-count more than one course between both degrees as appropriate to eliminate unnecessary duplication in course content.
2. Students must earn 30 usable (degree-appropriate) credits past engineering degree requirements. Usable credits are defined as credits — including AP, IB, credit-by-examination and course credits — that are of high enough level that they could be applied to degree requirements. For example, additional AP credits in economics could be used to satisfy a free elective credit in a degree program, but AP credit for statistics (ACMS 10145) cannot be used in either degree program because the class level is lower than the statistics requirements for any degree program in science or engineering.
3. Students must complete sequences of courses in mathematics, chemistry and physics, as described in the course sequences below and the corresponding table on the following page. This requirement ensures that all necessary material is covered through a sequence of classes, and that students do not duplicate content by taking classes from more than one approved sequence.
4. The exact set of courses a student must complete to earn both degrees will be determined by agreement between the appropriate associate/assistant deans of each college and will, naturally, depend on the pair of majors selected. Ordinarily, a student will present a plan of study that incorporates the above rules for approval.

[1]   AERO and ME students need not take AME 30314 Differential Equations, Vibrations, and Control I because it duplicates content of MATH 20750 Ordinary Differential Equations/ACMS 20750 Introduction to Applied Mathematical Methods II. However, they must take the 0-credit Vibrations and Controls make-up sequences through AME
